

Protect+ Backup & Disaster Recovery

Preparing For The “What If” Today, Ensures Your Company’s Tomorrow

How dependent is your business on your network and access to your data? Could you survive if disaster struck and shut down your server for a day? Or a week? What if a fire or some other disaster took place in your building and it forced you out of your office for two weeks? How would your employees access your company data and continue working? Was your data backup working...and if it wasn't...would your business survive?

FACT - 93% of companies that lost access to their data for 10 days or more due to a disaster filed for bankruptcy within one year of the disaster. 50% of those businesses filed for bankruptcy immediately. (National Archives & Records Administration in Washington)

Your Needs, Your Solution

Designed for organizations of various sizes and need, **Protect+ Backup & Disaster Recovery (BDR)** is an affordable, integrated local and offsite data backup and disaster recovery solution, as well as an essential for business continuity. Three secure copies of your data are created. The first will be a local copy stored on our secure backup appliance. By having a local copy of your data, we can perform quick restores of data. The other two copies will be stored in two geographically dispersed data centers for redundancy and protection of your data. Additionally, our solution provides monitoring of logs to confirm completion and restorability of the backups. Should an issue arise, an automated notification is provided.

Proactive 24x7x365 Monitoring

Our Network Operations Center (NOC) will monitor all of your backups for successful completion. When a problem is detected, the NOC will perform remediation activities to address the issue. This prevents us from finding out that your backups are failing at the time you need to restore.

Powerful, Complete Business Continuity

Our **Protect+ BDR** solution is specifically designed to give you peace of mind. We know that protecting your data and continuing business operations despite an emergency, is critical to the survival of your business for which there is no room for error. That is why our **Protect+ BDR** differentiates itself from competitors by providing features such as: a local warm spare server, an offsite virtual server for failover, and bare-metal restore functionality. In the event of an emergency, **Protect+ BDR** provides a complete business continuity solution by restoring access to your data rapidly, easily and affordably – regardless of the type of disaster. **When disaster strikes, your business needs to regain access to data and continue operations as quickly as possible, or you may lose your business..It's that simple!**

Comprehensive Disaster Recovery & Business Continuity

Provides a local warm spare server, an offsite virtual server for failover, as well as the replication of data to 2 offsite data centers for redundancy, resulting in the ultimate disaster recovery and business continuity solution.

Rapid Data Recovery

Local backup allows for the rapid restoration of all data - from block level to individual files - quickly, easily and affordably.

Compression & Deduplication

SSL encryption protects data transmission to offsite locations. Our data centers are protected by strict physical systems security measures.

Regulatory and Industry Compliance

Secure data protection enables organizations in highly regulated industries - financial, legal, health care, and others - to meet and exceed compliance requirements.

24x7x365 Monitoring

24x7x365 management and monitoring of logs to confirm backup completion and data restorability.

Microsoft Exchange & SQL Support

Delivers application specific backup testing and corruption detection with the ability to restore individual e-mail, SQL tables, and SharePoint documents.

Bare-metal Restore

Restore your server from scratch in the event of a hard disk failure to similar or dissimilar hardware.

Block Level Backups

Fast backups reduce the overhead of internal network traffic to only 1%.

Enhanced Security & Compliance

Reduces backup storage costs by up to 80% over traditional backup solutions with built-in deduplication.

Cost Effective

Affordable monthly rate includes: full management and support, as well as the restoration of data at no charge. There is no additional software to purchase or licenses to manage.

Comprehensive Warranty

Provides a full warranty for the repair or replacement of defective parts and hardware.
