

## Patch Management & End Point Protection

### Proactive & Complete Protection for Endpoints

More and more new threats of spyware, viruses, and other malicious malware are evolving daily and are becoming increasingly damaging. Spam, rootkits, phishing, web threats, and hackers can steal your valuable data, and can more importantly disrupt your network and your employee's productivity. Without constant application and security patch updates, vulnerabilities are exposed and the network is open and easily breached. Therefore, keeping your business adequately protected against known and unknown threats requires a comprehensive approach. Support+ Patch Management & Endpoint Protection is a single, integrated solution that safeguards your network, including remote users, and delivers peace of mind.

### Advanced Threat Protection

Companies worldwide have become increasingly dependent upon technology to run critical business operations. Therefore, frequent virus attacks and the speed with which malware can be released, has created serious downtime and security issues. In fact, according to recent malware statistics released by KSN and Viruslist.com, the most prevalent malware infects over 194,000 machines. More alarming, is that over 1.5 million new malware programs are published every month and are most typically contracted during legitimate business use. These can include dangerous rootkits, trojans, downloaders, worms, adware, spyware, and more. This malicious software can result in browser hijacking, redirection of search attempts, endless pop-up ads, Web sites visit tracking, unstable PC performance to the point of being unusable. Even worse, critical data and financial information can be stolen.

### Simple, Seamless, Secure

Utilizing a combination of enterprise class antivirus and antispayware solutions, along with the constant monitoring and management by Digerati Group's Network Operations Center (NOC) engineers, Support+ Patch Management & EPP provides a comprehensive and effective safeguard against these threats. We provide a proactive, real-time threat protection approach, as well as monitor the proper application and security patching.

### Comprehensive Protection

This multi-layered, proactive approach significantly lowers risks and gives you the confidence that your business assets and network are protected. Whether the attack is coming from a malicious insider or is externally motivated, endpoints will be protected. Support+ EPP increases protection, helps lower your total cost of ownership by reducing administrative overhead and costs associated with outbreaks, as well as minimizing downtime and maximizing productivity.

#### Key Benefits:

- ▶ Reduce Risk from Known and Unknown Types of Attacks
- ▶ Rapid and Simple Deployment
- ▶ Only Allows Trusted Applications to Run
- ▶ Reduce Cost of IT Support and Security
- ▶ Reduce Malware Penetration, Legal Liabilities, Business Losses
- ▶ Improves Endpoint Performance and End-User Productivity

### Secure Enterprise Endpoints from Malware and Unauthorized Software that Impacts Productivity and Security

#### Take Control of Your Endpoint Security with Key Features, such as:

- ✓ Multi-layered Security and Patch Management in a Single Agent
- ✓ Operating System Application Patch Management
- ✓ Operating System Security Patch Management
- ✓ Multi-Level Anti-Virus Real time Protection
- ✓ Anti-Rootkit
- ✓ Anti-Spyware Real-time Protection
- ✓ Complete Reporting and Alerting
- ✓ 24x7x365 Proactive Monitoring & Management
- ✓ Unlimited Support
- ✓ Affordable Pricing!
